

**Wright Coating Company** specializes in applying **Powder Coating to Plastics** (*Glass Filled Nylon, as well as, other high temperature materials*). In addition to the **Powder Coating of Plastics**; Wright Coating Company has perfected **Clear Coating of Plastics** to protect the finish.

---

## POWDER COATING OF PLASTICS

Dedicated plastic line – High or low volume – Fast color change  
Current Maximum part size: 20" x 60" x 40"

Wright Coating Company's 27 years of diverse powder coating application experience has enabled us to successfully develop **Classic Kote**, a proprietary process to **Powder Coat Plastics**. Our process offers unlimited color and numerous texture options in a true **CLASS A Finish**. Our process will benefit the Automotive, Office Furniture/ Seating, Appliance, consumer goods, Medical, and many other industries and diverse applications.

Our current customers' have enjoyed the benefits of our process which include: Cost Savings, Reduced inventories, UV Protection, New Substrates (which offer weight reduction and environmentally friendly materials), Multi-Finish options and improved color consistency producing and protecting a Class A finish.

Due to the proprietary nature of our process, we are unable to share specifics with you. However, we welcome and recommend a **FEASIBILITY REVIEW MEETING**. This meeting will address: your product and specifications, material requirements, color and finish options, and all pertinent information about your product and our process.

We at Wright Coating Company pride ourselves on being upfront and honest and look forward to reviewing your product for our **Classic Kote** process.
